

Scaffold – “Competent Person”

Are your scaffold systems constructed under the supervision of a “Competent Person” as required by OSHA? Have your employees completed their “Competent Person” training? Complete Safety, LLC can certify your employees in a class taught at your job site. The proper training creates a safe environment for your company and staff. Our classes are offered in both English and Spanish.

This 4-hour course is designed for construction workers, foremen, job superintendents, and anyone involved in the construction industry who oversee scaffold systems. OSHA requires that all scaffold systems be erected, inspected, and dismantled under the supervision of a “Competent Person.”

Why Obtain an scaffold “Competent Person” certification?

OSHA mandates training for workers who dismantle or erect scaffolding. Our training is in accordance with 29 CFR 1926 Subpart L, 1926.450 - 1926.454. In addition, employees who obtain certification increase workplace safety awareness and compliance, and reduce a company’s risk of fines and penalties resulting from OSHA violations. The benefits of this training are immediate as participants learn how to properly construct scaffold systems, and to prevent accidents and injuries.

OSHA requires retraining when new types of scaffolds are introduced, changes occur that the workers are not familiar with or if employee’s actions indicate retraining is needed. Complete Safety, LLC recommends “Competent Person” refresher training every five years.

Training Certification includes:

The certification training includes an interactive power point presentation delivered by an experienced construction safety trainer at your job site. Each attendee who successfully completes the course will receive a full-size “Competent Person” certificate and wallet card.

Testing:

Three modules, each with 20-questions quizzes will be provided to students. They must score at least 70% on each module quiz to move forward in the course. Students must have a score of at least 70% to pass this course.

What topics are covered in the course?

Topics cover safe procedures and work practices associated with erecting, dismantling, and usage of scaffolding. A graduate of this class is qualified to supervise the assembly and dismantling of scaffolding. This course incorporates only classroom training and does not include hands-on practice.

“Competent Person” Training includes:

- Types of Access Scaffolds
- Standards and Regulations
- Foundation Requirements
- Platforms and Platform Materials
- Scaffold Erection & Dismantling Procedures
- Scaffold Inspections
- Personal Protection Equipment
- Fall Protection

Classes can be designed to accommodate your company’s industry and business needs.
